

Integrated SAP ABAP Solution for “Materials Management (MM) Sector”: ALV Report, Smart Forms, and Submit Report

The Domain of Project

(SAP ABAP PROGRAMMING)

Under The Guidance Of

Mr. Santhosh Pal

Email: santoshpal393@gmail.com

SAP ABAP Associate Consultant at Infosys Limited

By

Ms. Y. VARSHITHA (BTech – CSE)

Period Of the Project

NOV 2025 to APRIL 2026

SURE TRUST

PUTTAPARTHI, ANDHRA PRADESH

DECLARATION

The project titled "**Integrated SAP ABAP Solution for Materials Management (MM) Sector: ALV Reporting, Smart Forms, and Submit Report**" has been mentored by **Mr. Santhosh Pal** and organized by SURE Trust from Nov2025 to April 2026. This initiative aims to benefit educated unemployed rural youth by providing hands- on experience in industry-relevant projects, thereby enhancing employability.

I, **Ms. Y. Varshitha**, hereby declare that I have solely worked on this project under the guidance of my mentor. This project has significantly enhanced my practical knowledge and skills in the domain.

EXECUTIVE SUMMARY

This project focuses on the development of an **SAP ABAP-based system** in the **Materials Management (MM) domain** to generate and manage reports using **ALV Reporting, Smart Forms, and Submit Reports**. The solution demonstrates how different ABAP techniques can be integrated to create **efficient, user-friendly, and professional reporting systems**.

The reporting functionality is implemented using **ALV Reports**, which provide structured and interactive data display. Features such as **sorting, filtering, and improved readability** enhance user experience. An Excel download option is included to allow users to export report data easily for further analysis.

The project also includes the development of **Submit Reports**, where one program calls another report dynamically using the **SUBMIT** statement. This demonstrates modular programming and efficient reuse of existing reports within SAP, particularly in handling procurement and material-related data.

Additionally, **Smart Forms** were designed to generate professional documents. These forms include features such as company **logo, address details, page numbering**, and **tabular data presentation**, making them suitable for official and business reporting purposes.

Overall, this project demonstrates key **SAP ABAP** concepts such as report generation, modular programming using **SUBMIT**, and form design using **Smart Forms**. It provides practical knowledge of how **reporting solutions** are developed in real-time **SAP environments**, especially within the **Materials Management (MM) module**, and highlights the importance of structured and automated reporting systems.

INTRODUCTION

Enterprise reporting and data management are essential for organizations to ensure smooth business operations and effective decision-making.

Traditional reporting methods often involve manual processes, limited flexibility, and lack of proper formatting, which can lead to errors and inefficiencies. To overcome these challenges, this project focuses on developing an SAP ABAP-based system in the **Materials Management (MM) module** using **ALV Reports, Smart Forms, and Submit Reports**. The application emphasizes efficient data retrieval, structured report display, and professional document generation. The ALV report is developed using the standard SAP table **MSEG**, providing a clear and organized view of material document data. An Excel download feature is included to allow users to export report data easily for further analysis.

The project also demonstrates the use of the **SUBMIT statement**, where one report program dynamically calls a standard SAP report. This enhances modular programming and promotes code reusability.

Smart Forms are used to generate structured output for **Business Partner data** using the standard table **BUT000**. The Smart Form is dynamically called through a driver program and displays data in a well-formatted layout.

Background and Context:

Modern organizations rely on SAP systems to generate accurate and timely reports for operational and analytical purposes. While standard SAP reports provide basic functionality, custom ABAP development is required to meet specific business needs.

Basic reporting techniques may lack flexibility and proper output formatting. This project addresses these limitations by implementing:

- ALV Reports for structured and user-friendly data display
- Smart Forms for professional document generation
- Submit Reports for modular and reusable program execution

By integrating these techniques, the project provides an efficient reporting solution within SAP. It demonstrates how different ABAP concepts can be combined to improve reporting, navigation, and output presentation in real-time business scenarios.

Problem Statement:

Generating accurate and well-structured reports is essential for organizations to support decision-making and business operations. Traditional reporting methods often involve manual effort, limited flexibility, and lack of proper formatting, which can lead to errors and inefficiencies. This project, developed in the **Materials Management (MM) module**, focuses on improving reporting efficiency using **SAP ABAP**.

Existing processes may involve:

- Manual data extraction and report generation.
- Limited reporting capabilities with poor data presentation.
- Difficulty in exporting and sharing report data.
- Lack of professional document formats for official use.

The challenge is to develop a system that provides:

- Efficient data retrieval from standard **SAP MM** tables.
- User-friendly report display using **ALV**.
- Ability to export report data into **Excel format**.
- Modular program execution using the **SUBMIT** statement.
- Professional document generation using **Smart Forms**.

Scope:

The project focuses on developing an **SAP ABAP-based reporting system** under the **Materials Management (MM) module** with the following key elements:

1. **ALV Report** –

Development of an ALV report using the standard SAP table **MSEG** to display material document data in a structured format, with Excel download functionality.

2. **Submit Report** –

Implementation of a report that retrieves purchase order data using standard tables (**EKKO, EKPO, EKET, LFA1**) and demonstrates the use of the **SUBMIT statement** to call a standard SAP report dynamically.

3. **Smart Form** –

Design and development of a Smart Form to display **Business Partner data** using the standard table **BUT000**, with a driver program to fetch and pass data to the form.

4. **Interactive Features** –

Implementation of user-friendly features such as selection screens, data filtering, and navigation to SAP standard transactions.

The scope is limited to reporting and form generation within SAP and does not include database creation, module pool programming, or external integrations.

Innovation:

This project introduces several features that enhance usability and reporting efficiency within SAP:

1. **ALV Report with Structured Display** –

The ALV report presents material document data from the MSEG table in a clear and organized format, improving readability and analysis.

2. **Custom Export Option** –

An Excel download feature is implemented using **GUI_DOWNLOAD**, allowing users to easily export and share report data.

3. **Submit Report Functionality** –

The use of the **SUBMIT** statement enables one report to call another standard SAP report dynamically, demonstrating modular programming and code reusability.

4. **Smart Form Integration** –

The Smart Form provides structured output for Business Partner data, improving the presentation of information in a professional format.

PROJECT OBJECTIVES

Project Objectives and Expected Outcomes

Objectives:

1. Develop a User-Friendly Reporting Interface

Create simple selection screens that allow users to input parameters such as Material Number, Plant, or Business Partner number for efficient data retrieval.

2. Structured Reporting using ALV

Implement ALV reports using standard SAP MM tables to display data in a clear, organized, and user-friendly format, improving readability and analysis.

3. Custom Data Export Functionality

Integrate an Excel download feature within the ALV report using GUI_DOWNLOAD to enable quick data extraction and sharing.

4. Modular Programming using Submit Statement

Demonstrate the use of the SUBMIT statement to call a standard SAP report dynamically, ensuring code reusability and modular design.

5. Professional Output using Smart Forms

Develop a Smart Form to generate structured output for Business Partner data using BUT000, providing a clean and formatted display.

Expected Outcomes:

- A functional SAP ABAP reporting system using standard SAP tables.

- ALV report displaying material document data from MSEG in a structured format.
- Excel download functionality for easy data export using GUI_DOWNLOAD.
- A Submit Report that dynamically calls a standard SAP report using the SUBMIT statement.
- Navigation to SAP transaction ME23N through interactive double-click functionality.
- A Smart Form generating structured output for Business Partner data using BUT000.
- Improved efficiency and accuracy in report generation and data presentation.
- A modular and scalable reporting approach that can be extended for other business scenarios.
-

Deliverables:

- **ALV Report Program**
Displays material document data using **MSEG**, with selection screen and Excel download functionality.
- **Submit Report Program**
Retrieves purchase order data using **EKKO**, **EKPO**, **EKET**, and **LFA1**, and uses the **SUBMIT** statement to call a standard SAP report. Includes navigation to **ME23N**.
- **Smart Form**
Displays Business Partner details using **BUT000**, with a driver program to fetch and pass data to the form.

- **Documentation**

Technical documentation explaining ALV report, Submit report, and Smart Form implementation.

- **Testing Results**

Validation of data retrieval, Excel download functionality, Smart Form generation, and correct execution of SUBMIT and navigation.

Project 1: ALV Report (MSEG)

Objective:

- To display material document data using MSEG.
- Provide functionality to **download the report into Excel** file.
- Allow the user to choose the file path and name dynamically.

Method:

- **Selection Screen** → Implemented using SELECT-OPTIONS for Material Document Number (MSEG-MBLNR).
- **ALV Display** → Using function module REUSE_ALV_GRID_DISPLAY.
- **Toolbar Customization** → Implemented using PF-STATUS (SE41) to add Excel download button.
- **User Interaction** → Handled using USER_COMMAND for button actions.
- **File Selection** → Used CL_GUI_FRONTEND_SERVICES=>FILE_SAVE_DIALOG to allow user to choose file name and location dynamically.
- **Download to Excel** → Used function module GUI_DOWNLOAD with WRITE_FIELD_SEPARATOR = 'X'.

Steps:

- Create program in SE38.
- Define selection screen using SELECT-OPTIONS for Material Document Number.
- Fetch data from standard SAP table **MSEG** into an internal table.
- Display data using REUSE_ALV_GRID_DISPLAY.
- Create PF-STATUS (SE41) to add Excel download button.
- Handle user action using USER_COMMAND.

- Use CL_GUI_FRONTEND_SERVICES=>FILE_SAVE_DIALOG to select file path and name.
- Use GUI_DOWNLOAD to save the file in the selected location.
- Display success message after download.
- Display success/failure message.

Result:

FIG.2 Material Document ALV Report (Excel Output)

Project 2: Smart Forms

Objective:

- To design a Smart Form to display **Business Partner details**.
 - To generate structured output using SAP Smart Forms.
 - To dynamically call the Smart Form using a driver program.
-

Methods:

- Used standard SAP table:
 - **BUT000** (Business Partner Master Data)
- Created Smart Form:
 - Name: **ZVAR_SF_MP**
- Developed driver program in SE38:
 - Report: **ZVAR_SF_MAJORPRO**
- Implemented selection screen:
 - Input field for Business Partner Number
- Used function module:
 - **CONVERSION_EXIT_ALPHA_INPUT** (for leading zeros)
- Retrieved data using:
 - **SELECT SINGLE** from BUT000
- Fetched Smart Form function module dynamically:
 - **SSF_FUNCTION_MODULE_NAME**
- Called Smart Form using:
 - **CALL FUNCTION** lv_fm_name

- Passed data:
 - Header structure → WA_BUT000
 - Internal table → IT_KNA1
-

Execution:

- User enters Business Partner number.
- System converts input into SAP format.
- Data is fetched from BUT000.
- Smart Form function module is generated dynamically.
- Smart Form is executed and output is displayed on screen.

Result: Smart Form

Program 3: Submit Report Program

Objective

- To develop a report that retrieves purchase order data and displays it using ALV.
- To demonstrate the use of the SUBMIT statement to call a standard SAP report dynamically.
- To provide interactive navigation to SAP transaction screens.

Flow/Working

When the user executes the program, a selection screen is displayed.

The user enters input parameters such as:

- Material Number
- Plant

The system retrieves data from standard SAP tables:

- EKPO (Item data)
- EKKO (Header data)
- LFA1 (Vendor data)
- EKET (Schedule line data)

The data is processed to calculate:

- Open Quantity
- Status (OPEN / COMPLETE)

The report displays the data using ALV (CL_SALV_TABLE).

On double-click of a row:

- The system navigates to transaction ME23N (Display Purchase Order).

After displaying the ALV report:

- The program uses the SUBMIT statement to call standard SAP report:
 - RM06EM00
- Input parameters are passed dynamically.
- Control returns to the original program using AND RETURN.

LEARNING AND REFLECTION

Learning and Reflection:

Working on these SAP ABAP projects has been a valuable learning experience. Each part of the project helped me understand different aspects of reporting and output generation in SAP.

It was not just about coding, but also about understanding how data is retrieved, processed, and presented in a meaningful way for business use.

Some of the key things I learned:

- **ALV Reporting:**
I learned how to use **ALV** to display data in a structured and user-friendly format. Features like sorting, filtering, and Excel download made reporting more efficient and practical.
- **Submit Report:**
I understood how to use the **SUBMIT** statement to call another report dynamically. This helped me learn modular programming and how standard SAP reports can be reused.
- **Smart Forms:**
Designing Smart Forms helped me understand how to generate structured outputs from **SAP** data. I learned how to pass data from a driver program and display it in a formatted layout.
- **Data Handling:**
I gained knowledge of working with standard **SAP MM** tables like **MSEG**, **EKKO**, **EKPO**, **EKET**, **LFA1**, and **BUT000** for retrieving and processing data, and understood how the **Materials Management (MM)** module supports real-time business operations.

Overall, this project improved my understanding of report development and output generation in SAP ABAP. It also helped me build confidence in developing practical solutions based on requirements.

Experience:

The overall experience was a combination of learning and problem-solving. Initially, understanding how to retrieve and display data correctly was challenging, but with practice, I became more comfortable with ABAP concepts.

Working on **ALV reports** helped me understand how important reporting is for business decision-making. Implementing Excel download functionality showed how users can easily export and analyse data.

The **Submit** Report was particularly useful in understanding how SAP programs can interact with each other. The Smart Form development gave me insight into how professional documents are generated in real business scenarios.

Throughout the project, debugging errors and testing different scenarios improved my logical thinking and problem-solving skills. By the end, I felt confident in handling reporting-based **ABAP** tasks independently.

CONCLUSION AND FUTURE SCOPE

Conclusion:

This project provided a strong foundation in SAP ABAP, especially in the areas of reporting and form generation. I learned how ALV reports, Submit statements, and Smart Forms work together to create effective business solutions.

The project successfully demonstrated how data can be retrieved from standard SAP tables, displayed in a structured format, and converted into meaningful outputs.

Overall, this experience helped me gain practical knowledge and improved my confidence in developing real-time SAP ABAP applications.

Future Scope:

If this project is extended further, the following improvements can be made:

- Enhancing ALV reports with advanced features such as layouts, filters, and additional user options.
- Improving Excel export functionality with better formatting and structured output.
- Enhancing Smart Forms with logos, headers, and more detailed layouts.
- Adding more validation and dynamic input options in selection screens.
- Exploring advanced reporting techniques using modern tools like CDS views or SAP Fiori.
- Integrating reports with other SAP modules such as MM and SD for more comprehensive business scenarios.
